Execution

Every recommendation starts with the floor.

A considered approach.

From assessment to aftercare.

✓ Trained Manpower

✓ Quality Assurance

✓ Production Planning

✓ Warranty Support

01 / START WITH THE PROBLEM

What Problem Are You Facing?

You don't need to know the system name. Start with what is happening on your floor; we can assess the conditions before recommending an approach.

01

02

Dust Generation

[Skip to Home page content](#)

03

Peeling / Damaged Coating

04

Static Control Requirement

05

Hygiene Requirement

06

Water Penetration

07

Electrical Insulation

08

Heavy Traffic / Forklift Wear

DUST GENERATION

Look beneath the dust.

Assess the existing surface, wear and cleaning routine before reviewing a flooring or coating approach.

Possible systems may include:

[Epoxy Flooring](#) → [PU Flooring](#) →

Final recommendation depends on site assessment.

[Schedule Assessment](#) →

02 / FLOORING SOLUTIONS

Different requirements. The right system.

[Skip to Home page content](#) flooring and surface protection categories. Final specification depend on your site.

[About Akshaya](#) →

01 Built around operational continuity

Production planning brings the work sequence, site access and available shutdown window into the conversation early.

02 Hygiene, safety & quality in focus

Cleaning routines and project-specific compliance requirements inform the assessment and system discussion.

03 Long-term use matters

Durability and maintenance requirements are considered alongside the way your facility operates.

04 People and process, together

Professional execution combines trained manpower, coordinated and quality assurance.

[Skip to Home page content](#)

We Don't Recommend a System Without Understanding the Floor.

Six connected considerations. One site-specific recommendation.

- 01 Surface Condition
- 02 Moisture / Site Assessment
- 03 Operating Environment
- 04 Correct System Selection
- 05 Controlled Application
- 06 Final Inspection

01 SURFACE CONDITION

Understand what is already there.

Review the substrate, existing finish, cracks and visible damage. The surface sets the starting point for the recommendation.

A clear path. From first visit to aftercare.

Know what happens next. Explore each stage of the project journey.
